

#### **University of Toronto**

Candidate, Honours Bachelor of Science

> Specializing in the Entrepreneurship Stream of Computer Science Co-op

Sep 2018 – Present Toronto, ON, Canada

# **Experience**

#### **Software Developer**

OpenText, **DevX** (Developer Experience) team

Jan 2020 – Aug 2020 Richmond Hill, ON, Canada

- > Created a document management app to demonstrate OpenText's cloud content management APIs and services, using **React**, **Redux**, **React Router**, **Material-UI**, and **TypeScript**
- > Reduced document CRUD operation time by **40%** and codebase by **>500** lines by implementing a document tree data structure in the **Redux** store to manage global application state
- > Created a **Python Tornado** dashboard app to display unit test results, using **D3.js** and **Bootstrap**
- > Configured automated testing **Python script** to accommodate Windows VMs, using **PowerShell** and **Paramiko**

## **♥** Skills

**Languages** JavaScript/TypeScript, Python, Java, HTML, CSS, C

**Libraries/Frameworks** React/React Native, Node.js, Express, Redux, Spring Boot, Material-UI, Bootstrap

**Technologies** Git, MongoDB, Neo4j, Unix, Postman, Jira, GitHub

**Methodologies** REST APIs, microservices, full stack development, NoSQL, Agile Scrum/Kanban, version control

## **△** Projects

## **Safer Strides – Crime heat mapper app**

- > A mobile app that displays a crime heat map over Toronto with real-time police reports scraped from Toronto Police Twitter, built with **React Native**
- > Automated web scraping of police report tweets using UiPath's Robotic Process Automation tool
- > Wrote a **Python script** to parse web scraped tweets into **JSON** objects

## Planit - Trip advisor app

- > A full stack mobile app that generates vacation itineraries, built with **React Native**, **Java (Spring Boot)**, **MongoDB**, and **Google Maps API**
- > Implemented itinerary manipulation such as adding and deleting specific events from the itinerary while shifting existing ones, as one of the main features
- > Created **CRUD REST API** endpoints for itinerary information and filters, queried with **JSON**
- > Followed the **Agile Scrum** development process while using **Jira** for project management

## Spotify-lite - Backend microservices

- > A backend for a music player service composed of two **REST API microservices**, built with **Java (Spring Boot)**
- > Stored user info in a MongoDB collection and playlists in a Neo4j graph respectively
- > Wrote **Cypher graph queries** for nodes up to three relationship depths away
- > Used **Postman** for testing endpoint calls and microservice communication
